Infrastructure Systems Group

DATA CENTER

Modern data centre face require working with the right tools and solutions. Modular, purpose-built data centre infrastructure allows organizations to develop data centre services based on need – when capacity rises and where capacity is needed.

STRUCTURED CABLING

Structured network cabling involves using a flexible and singular cabling infrastructure to connect multiple computers, phones and other devices together. Specialized sockets are provided for plugging in your multiple devices.

IP TELEPHONY

IPT solutions is an effective way to save on equipment, space and expense. IP-PBX Telephone Solutions with IP telephones help reduce cost without limiting performance.

ACCESS CONTROL

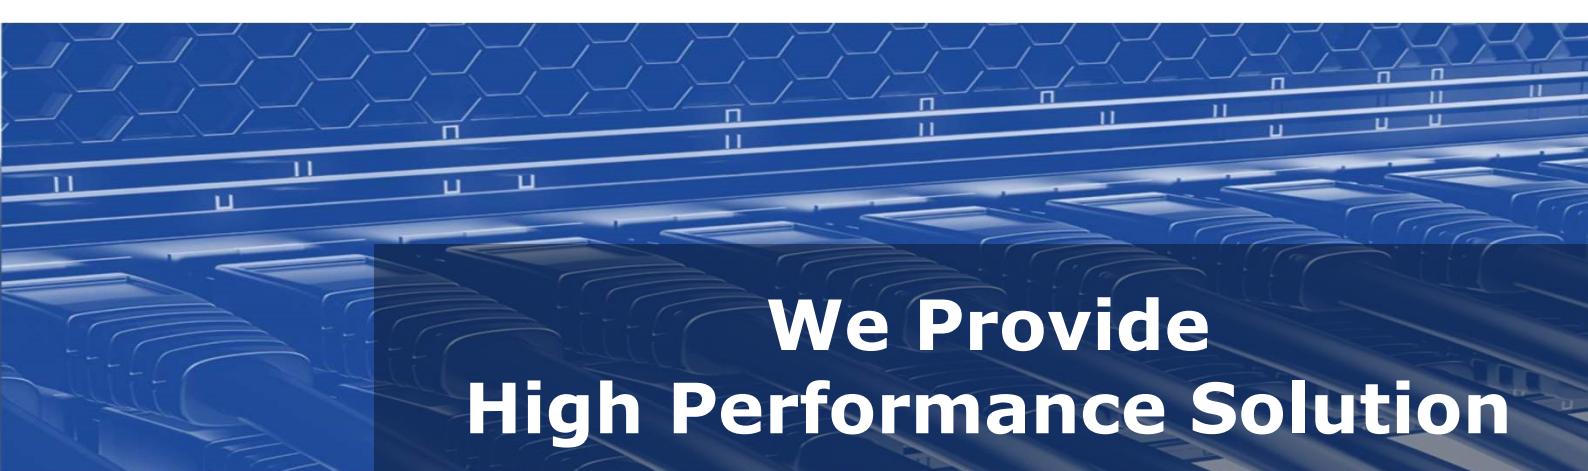

Advanced, software-driven access control systems go beyond the conventional security tools that businesses use to provide access to authorized persons. Access control systems can deliver highly detailed audit trail reporting which can come extremely handy in knowing the presence of individuals at specific times within the business premises.

WI-FI

Wi-fi has emerged as one of the most popular forms of wireless networking in recent times. It is the preferred form of wireless networking in homes, business local area networks and public hotspots as it entails zero handling of cumbersome wires, routers or cables.

CCTV SURVEILLANCE

Businesses today need infrastructure that's driven majorly by technology and generally constitutes expensive servers, workstations and hardware to keep pace with the competition. It is imperative to ensure fool proof arrangement for the safety of equipment as theft will not only impact performance.

We Provide
High Performance Solution

Information Security

Application Security

Applications are everywhere. Your office suite, your e-mail reader, the software you're using right now to read this - these are just a fraction of the applications you use daily both personally and professionally.

Mobile Application security

Smartphones are the new credit cards. This is where our wallets are. And this is where our most critical information lives. Are your mobile applications secure enough to earn and retain the confidence of your customers?

Network Security

It's not a question of will your network be compromised—it's when. Most security-conscious businesses around choose CommNet when it comes to securing their networks. For availability. Integrity. Confidentiality. Manageability. And safety. Of their networks.

Information Security consulting

Today, information security is no longer a fad, it is a necessity and a business enabler. A security breach could result in loss of productivity, revenue, employee morale and customer confidence. We help you improve your team's security culture and incrementally improve your processes so you can stop security mistakes at the right time, with ISO27001 implementation.

We consult Your Needs
Of Technology

IoT platform can help organizations reduce cost through improved process efficiency, asset utilization and productivity. With improved tracking of devices/objects using sensors and connectivity, they can benefit from real-time insights and analytics, which would help them make smarter decisions.

"If we had computers that knew everything there was to know about things - using data they gathered without any help from us - we would be able to track and count everything, and greatly reduce waste, loss and cost. We would know when things needed replacing, repairing or recalling, and whether they were fresh or past their best. We need to empower computers with their own means of gathering information, so they can see, hear and smell the world for themselves, in all its random glory." This is precisely what IoT platforms does for us.

Professional Services/ IT Outsourcing

Our Staffing division places top technology professionals in contract, contract-to-hire, direct hire and SOW / Statement of Work based positions with industry leaders and innovative start-ups that are developing the next generation of technology solutions. Commnet's flexible cost-effective delivery models feature dedicated account teams, skill-based recruiters and proven systems and processes. Our Consultant care teams are unique in the industry and ensure a satisfactory assignment for both Consultant and Client.
